Quadriga – Dynamic and Power, the new Tyre Changer Concept

Pfungstadt, September 2008 – „Quadriga – Dynamic and Power, the new Tyre Changer Concept“ - this is Snap-on Equipment's motto for the automechanika show, a synonym for a new generation of automatic tyre changers.

The new automatic tyre changer comes with outstanding dynamic procedures, controlled power and accuracy and consequently guarantees optimum results because all operations, especially bead breaking, are accomplished efficiently while preserving both tyres and rims.

In automatic mode standard tyres are mounted and demounted nearly without any intervention from operator's end. When it comes to handling critical tyres, the manual mode allows controlled handling of delicate procedures.

The individual steps of the mounting and demounting procedure can be carried out separately in automatic mode. Moreover the machine is especially user-friendly as a lift moves the wheels to the exact clamping position
